TRONITEC SERVICE DOCUMENT (TSD#47)
VEEDER ROOT TLS-350 TCP/IP MODULE INSTALLATION

TCP/IP modules come with all settings reset to factory defaults. To properly configure the TCP/IP module's IP address/setup, you **__must__** use a PC connected to the TCP/IP module. Also, be sure to perform the Communications Setup on the console to specify which type of module you are installing.

Refer to Veeder Root manual 577013-776 TCP/IP Interface Module Installation Guide for detailed instructions.
